**Your safety is our mission.**

# OJT SIMULATION ON-SITE EVALUATION FFS

- MQTG RE-RUN AUTOMATIC TEST
- MQTG RE-RUN MANUAL TEST
- FACILITY REQUIREMENTS EVALUATION & FSTD SAFETY ITEMS
- SUBJECTIVE EVALUATION. FLIGHT PROFILE

# MQTG RE-RUN AUTOMATIC TEST

# MQTG RE-RUN AUTOMATIC TEST

## → OBJETIVE OF THE PROFF

- Check FSTD behaviour accordding to MQTG requeriments
- Obtain evidences that MQTG is representative of the FSTD
- Added to MQTG

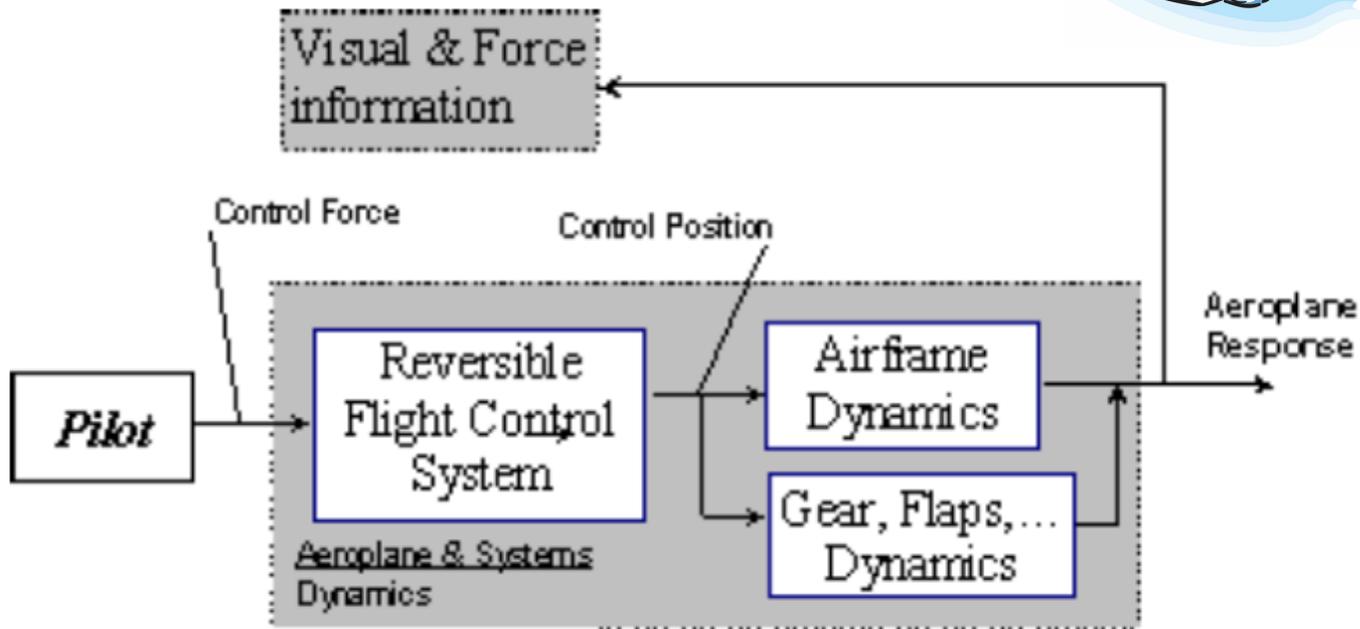

## → AUTOMATIC TEST

- Run directly for the device only with a specific SW tool or similar interface.
- No human interaction.

Roll control	Free	Free	Auto	Auto	Auto	Free	Auto
Rudder control	Free	Free	Auto	Auto	Auto	Free	Auto
Record of the Data	No	yes	yes	yes	yes	yes	yes

<b>Free</b>	The parameter is completely free and may change naturally during the flight.
<b>Hold</b>	The parameter is kept at a natural constant by changing the controls marked Auto.
<b>Fixed</b>	The control is set at a fixed value so that it can not be moved by any external forces.
<b>Auto</b>	The control is moved automatically in order to keep the parameters set to Hold at a constant value.

# MQTG RE-RUN AUTOMATIC TEST

→ QTG SW MODULE

→ QTG Autopilot SW Mode. Command Sequence set Altitude 2000 ft 5''

Name	Comments
auto_OFF	Release QTG Auto_Test mode
power_FLIGHT_IDLE	Set engine parameters to flight idle power
power_GROUND_IDLE	Set engine parameters to ground idle power
power_TKOFF_MAX	Set engine parameters to maximum take-off power
power_GOAROUND_MAX	Set engine parameters to go-around power
wait	Suspend the test
Gear	Move the gear lever to the desired position, ( 0 for Up and 1 for Down)
Flaps	Move the flaps lever to the desired position
Spoiler	Unused
set_bank_angle	Ask the QTG Auto_Test to maintain the desired bank angle
set_attitude_angle	Ask the QTG Auto_Test to maintain the desired attitude angle
SQtgSetPaMode	Ask the QTG Auto_Test to maintain the desired rudder angle
Stop_Test	Stop the test procedure
Start_Test	Start the results recording
SetPAMode	Set the QTG Auto_Test to the desired mode
SetSpeed	Ask the QTG Auto_Test to maintain the desired speed
SetAttCmd	Send an impulse to the elevator
SetBankCmd	Send an impulse to the aileron
SetRudderCmd	Send an impulse to the rudder

Name	Comments
SetAttCmdPalier	Send a step to the elevator
SetRollCmdPalier	Send a step to the aileron
SetRudderCmdPalier	Send a step to the rudder
SetUserPower	Send a step to the power lever
SetPAManettes	Set the power lever to the desired position
EngineBroken	Change the aircraft state: 0 for 'All engines operating', 1 for 'Left engine in-op', 2 for 'right engine in-op' and 3 for 'All engines in-op'
Visu_Instru_Qtg_msg	Ask the Instruments and visualization modules to send pitch, roll and yaw angle position
trim_prof	Set the pitch trim to the desired position
trim_dir	Set the yaw trim to the desired position
mem_pos_trim	Set the effort origin
deconnectionPA_att	Disable QTG Auto_Test in pitch axis
deconnectionPA_roll	Disable QTG Auto_Test in roll axis
deconnectionPA_rudder	Disable QTG Auto_Test in yaw axis
mode_stop	Set the aircraft to STOP or GO mode (0 for GO and 1 for STOP)
set_rudder_auto_heading	Set the QTG Auto_Test to AUTO_HEADING mode and ask it to maintain the desired rudder angle
incAltitude	Increase the altitude of the aircraft with the desired step
setAltitude	Set the altitude of the aircraft to the desired value

QTGPlayer

Conversion to Flight Model

St	Date	Qtg Name
✓	12/09/17	DA42_QTG
✓	24/08/17	MPG10_A_FNPT2_AL250
✓	24/08/17	MPG3_A_FNPT2_AL250
✓	24/08/17	BPG9_A_FNPT2_AL250

The QTG file is now open.

The list of tests contained in the QTG file is displayed in the bottom left part of the software. You can select a test by clicking on it. For each test, the test protocol will be displayed as a pdf document and the test results will be show as charts.

The following functions are now available :

- Run a test of the QTG.
- Export in pdf or print a test of the QTG.
- Save the QTG file
